

PIPES WARNING BANDS

DESCRIPTION:

Underground pipes warning bands. The use of these bands avoids any possible damage to pipes when further digging operations have to be carried out, since they signalize their presence.

They are made of low density polyethylene and are available in different colours according to different uses: water, gas, electric power, teleheating, telephone, drains.

They can be supplied with aluminium band to allow the detection of plastic pipes.

DESCRIPTION AND TECHNICAL CHARACTERISTICS:

Polyethylene band with an indelible black printed writing, resistant to diluted chemical products and to atmospheric agents.

Thickness	0,04 mm
Band height	12 cm or other sizes on request
Simple band length	200 ml
Length of the band supplied with aluminium band	150 ml
Colours	light blue, yellow, red
Polymer	low density polyethylene
Ultimate elongation	80 %

PACKAGES:

12 roll boxes, available also for the type with aluminium band.
