

THERMakil®

Biocide sanitizer for heating-cooling circuits

DESCRIPTION:

Algaecide, bactericide, broad-spectrum virucide, specifically for cooling and heating systems. Indicated for the removal of mucilage and algae from closed-circuit systems such as radiating floors or solar panels with the help of a Disinex pump.

INSTRUCTIONS FOR USE:

Make the product circulate, preferably with a Disinex pump or similar (pumps suitable to clean up the systems) in a ratio of 1-1,5% for the necessary time for removal: usually it takes from 30 to 60 min. to disaggregate also the most stubborn types of aerobic and anaerobic bacteria. After the treatment empty out the system and rinse with water, then protect the system with a suitable corrosion inhibitor FILMAX, already added with antibacterial, or if necessary with the right % of Atigel (antifreeze). For a preventive action use THERMAKIL at half concentration (0,5 - 0,75%).

TECHNICAL DATA:

Appearance	liquid
Colour	colourless
Odour	fruity, typical pungent
PH	3,2 ± 0,05
Boiling point	> 100 °C
Relative density (H ₂ O = 1)	1 ÷ 1,10 kg/l
Solubility in water	excellent and complete

PACKAGING:

Bottle 1 l
Tank 5 l.
