

COVERGAS SHEATH

Spiral Hose

DESCRIPTION:

Flexible self-extinguishing plastic-coated PVC sheath with reinforced spiral and smooth internal surface for the protection and insulation of gas transport pipes.

Compliant with the provisions of UNI-CIG 7129/08, Ministerial Decree 21/4/93 and Law No. 1083, very flexible, with rigid shockproof PVC spiral for anti-crushing reinforcement.

The completely smooth interior facilitates its use, also avoiding any possible gas stagnation, unlike corrugated or compactable sheaths which, not being smooth internally, make it difficult to use.

High resistance to atmospheric and chemical agents; completely watertight and waterproof, it protects the ducted pipes, insulates from stray currents and has a thermal insulation function by absorbing the thermal expansion of the ducted pipes; excellent resistance to crushing.

TECHNICAL DATA:

- Self-extinguishing according to **UL 94** classified **V0**
- High resistance to atmospheric agents and chemical aggressors
- Complies with the requirements of CEI-EN-50086-2-2 Standards for Class 2221
- Complies with UNI-CIG 7129/08 Standard.
