

# TRACKFLUO

## Fluorescent tracer, leak detector in water systems

### DESCRIPTION:

Highly concentrated fluorescent yellow additive, used as a leak detector for water circuits both for summer and winter air conditioning and services and for sanitary use. Essential for locating the origin of water leaks of any size, in closed or open circuit systems, drain pipes, sewers, tanks, wells, downspouts, as well as reservoirs, cisterns, pipelines, terraces and for checking the tightness of waterproofing.

TRACKLUO can also be useful for groundwater tracking and research.

The dyes used are not harmful to humans, the environment and waterways and it is therefore possible to use the product in complete safety. To make the presence of the tracer more evident, the use of a UV lamp is recommended, checking every point of the circuit and paying greater attention to the points where the leak is suspected to be located.

The product can be used in the most varied sectors such as:

- mechanical industry
- textile industry
- Chemical plants
- industrial and civil air conditioning system
- Food industry

It will leave a "fluorescent trace" that will be easily located by inspecting with an ultraviolet lamp. This will allow the leak to be identified and repaired without having to recharge the system unnecessarily.

### FIELDS OF APPLICATION:

- Summer and winter air conditioning systems
- Solar thermal systems
- Geothermal plants
- Refrigeration systems
- Sanitary facilities
- Industrial plants
- Tube bundles and heat exchangers
- Exhaust pipes
- Wastewater plants

### HOW TO USE:

Add to the circuit at the rate of one 500 ml bottle per 1,000 litres of water.

**Note:** Store away from direct sunlight and UV rays.

**TECHNICAL DATA:**

Clear liquid appearance  
Fluorescent yellow color  
Odore inodore  
Density  $0.98 \pm 0.02$  g/ml  
pH  $7.5 \pm 0.25$   
Total water solubility

**PACKAGING:**

500 ml bottles, boxes of 8 pcs.  
Item number TRACKGI2X0500
